## EE24BTECH11032- John Bobby

**Question:**A tank with rectangular base and rectangular sides, open at the top is to be constructed so that its depth is 2 m and volume is 8  $m^3$ . If building of tank costs 70 per sq. meter for the base and 45 per square meter for sides. What is the cost of least expensive tank?

**Solution:** Let the length be x and the breadth be y

#### I. THEORETICAL APPROACH

Volume = 
$$(2)(x)(y) = 8$$
 (1)

$$xy = 4 \tag{2}$$

Total Cost = 
$$70(xy) + 45 \times 2(2x + 2y) = 280 + 180(x + y)$$
 (3)

From equation (2)

Total Cost = 
$$280 + 180x + \frac{720}{x}$$
 (4)

Differentiating wrt to x on both sides,

$$\frac{dy}{dx} = 180 - \frac{720}{x^2} \tag{5}$$

To be a critical point  $\frac{dy}{dx}$  must be zero,

$$180 - \frac{720}{r^2} = 0 \tag{6}$$

$$x^2 = \frac{720}{180} \tag{7}$$

$$x = \pm 2 \tag{8}$$

(9)

x = 2 as length cant be negative

Checking  $\frac{d^2y}{dx^2}$  to be positive for minimum

$$\frac{d^2y}{dx^2} = \frac{1440}{x^3} \tag{10}$$

$$\frac{d^2y}{dx^2} > 0 \text{ for } x = 2 \tag{11}$$

Thus x = 2 is the minimum

### II. GRADIENT DESCENT

$$x_{n+1} = x_n - \alpha f'(x_n) \tag{12}$$

$$x_{n+1} = x_n - \alpha \left( 180 - \frac{720}{x_n^2} \right) \tag{13}$$

Where  $\alpha$  is the learning rate,

This iteration will stop until we reach a stable state  $(f'(x) \approx 0)$  We get,

 $x_{min}=2$
